Education

Kamla Nehru Institute of Technology (KNIT's)

Master of Science in Computer Application

Nov. 2022 – June 2024

Sultanpur, Uttar Pradesh

Relevant Coursework

- Data Structures
- Machine Learning
- Artificial Intelligence
- Operating System
- Software Development
- Database Management
- Internet Technology
- Computer Architecture

Experience

Tata Consultancy Services (TCS)

Jan 2024 – Present

Product Engineer

Lucknow, Uttar Pradesh

- Engineered backend services using Java, implementing robust ETL processes and delivering scalable enterprise applications that supported over 10,000+ users with 99.9% uptime and seamless data integration.
- Designed and optimized MySQL database architecture, resulting in a 30% improvement in query performance and significantly enhancing data integrity across key business-critical systems.
- Integrated Jenkins for CI/CD pipelines, automating build, test, and deployment processes—which involves integrating code changes frequently, testing those changes automatically, and delivering software seamlessly across multiple environments.
- Standardized code management using TortoiseSVN, creating a streamlined development workflow that is now used by over 15 engineers, resulting in more efficient and organized project lifecycle.

Projects

iON Digital Learning (IDL) | Java, MySQL, ETL (Extract Transform Load), Data Analytics

January 2025

- Developed and maintained backend data automation workflows using Java and SQL to support real-time content delivery across the iON Digital Learning platform.
- Designed and supported iON Digital Learning (IDL), a cloud-based education platform by TCS, delivering digital learning solutions to 5000+ schools, colleges, and corporate training programs nationwide.
- Enabled seamless access to 10,000+ online courses, assessments, and learning materials, ensuring high availability and consistent user engagement across diverse institutions.
- Monitored live usage metrics and system health through custom dashboards, ensuring 99.9% uptime and consistent user experience across schools and corporate clients.

Plant Leaf Disease Detection - Major Project | Deep Learning, Machine Learning, CNN, Pytorch, Flask

May 2024

- In this project, we've enhanced our Tomato Leaf Disease Detection to cover 15 plant types with 39 disease classes.
- In that project, we trained our model using a training dataset containing 61,486 images. We found that the model accuracy reached 96 to 98 percent.
- Detects and classifies diseases in plant leaves using image processing and machine learning techniques.
- Takes images of leaves as input and analyzes visual patterns (spots, discoloration, and texture) to determine the type of disease.

Tomato Leaf Prediction - Mini Project | Deep Learning, Tensor Flow, CNN, MNIST, Reacts

December 2023

- Developed a deep learning model achieving a 95% accuracy rate in predicting tomato leaf health and classifying diseases, including early or late blight.
- Collaborated in a 4-member team, contributing to developing CNN-based Machine Learning model with impactful results.

Technical Skills

Languages: Python, Java, SQL.

Developer Tools: VS Code, Eclipse, Firebase and Vercel.

Cloud Platform: AWS and Google Cloud Platform.

Technologies/Frameworks: Machine Learning, Jenkins, GitHub, TortoiseSVN.

Certification

25+ G.C.P Skill Badge — [Profile Link](#)

AWS Certified Solutions Architect – Associate — [Cert Link](#)

AWS Cloud Quest: Cloud Practitioner — [Badge Link](#)

AWS Cloud Quest: Generative AI Practitioner — [Badge Link](#)
